Secure, natural looking teeth in as little as one day

Patterson Family Dentistry, P.C.
Dr. Nathan Patterson & Dr Ryan Patterson
Why replace missing teeth?

Losing one or more of your teeth creates a gap in your smile, affects your ability to chew properly, and can alter your diet and nutrition.

Smile big, eat what you want, be a more confident you!
Prevent Premature Aging

Tooth loss causes bone loss

Dental implants, like natural teeth, stimulate the jaw and reduce bone loss.
Traditional dentures

- Difficulty chewing certain foods
- Slurred speech and embarrassing clicks, whistling or smacking
- Slipping or moving of the denture
- Gum and mouth irritation
- Pain caused by poor fitting dentures
Treatment Options

- Missing all teeth on top or bottom
- Implants are placed
- Denture attached to implants
How does TeethXpress® work?

• Meet with a Certified TeethXpress Dentist
• Create a personalized treatment plan
• 4 to 6 implants are placed into your jaw
• Prosthesis secured with special screws
After the procedure

• Use medicated mouth wash for the first two weeks
• After two weeks, use a water pick on a gentle setting to clean teeth
• After eight weeks, you can begin eating normal foods again
• Additional instructions will be prescribed
TeethXpress® advantage

- Procedure is well tolerated and of a short duration
- May eliminate need for invasive bone grafting
- May receive fixed teeth in a single visit
- Highly hygienic, easy to maintain and clean
- Natural looking teeth that feel and function like your own
Real Patient Stories from TeethXpress
Marc’s TeethXpress® story

• suffered from the effects of advanced gum disease
• teeth were becoming loose and starting to fall out
• Received a partial denture to replace his top front teeth

“With dentures, you have to use some kind of compound to keep the teeth in,”
Marc said.

“They were coming loose all the time,”
Marc’s TeethXpress® story

With only 10 remaining teeth, all of which were loose, Marc was unable to chew food properly and was uncomfortable smiling.
Marc’s TeethXpress® story

Marc’s teeth were secured with
- 5 implants in the lower jaw
- 5 implants on the top
- implant surgeon gave him local anesthesia to numb his mouth
Marc’s TeethXpress® story

“After they put the teeth in, it knocked 20 years off the way I looked, it really did,”

“...dental implants are the best alternative for anyone because of the stability of the teeth and the fact that you can eat things in a normal fashion.”
Marc’s TeethXpress® story

“The day I had the finals put in, my son took me out to a steak dinner. It was wonderful! It felt so good to chew.”
Marc’s TeethXpress® story

• The implant surgeon monitored Marc’s healing to make sure the implants were bonding with his jawbone correctly

• Healing usually ranges from two to three months but varies from person to person

“I’m very impressed with the whole procedure and I would highly recommend it to anyone. It certainly changed my life.”
Gwen’s TeethXpress® story

• Gum disease caused Gwen’s teeth to loosen and one front tooth to be extracted
• Five stable teeth were filed down to support bridgework
• Over time the bridgework weakened Gwen’s five supporting teeth

“I was never really happy with it,”
Gwen said of the bridge.
“The teeth were just too big.”
Gwen’s TeethXpress® story

Advanced gum disease ravaged Gwen’s smile; a failing dental bridge no longer looks natural or functions well.

After receiving all new teeth supported by dental implants, Gwen can chew easily and smile freely once again.

“I had beautiful teeth before all this happened and I was always smiling,”
Gwen’s TeethXpress® story

• Gwen received 11 dental implants—6 in the upper jaw and 5 in the lower jaw
• temporary teeth were attached to the implants
• After healing, she received new permanent, custom-made teeth just for her

“I missed my old smile, until I got it back.”
